Summary

Information and Communication Engineering graduate with hands-on experience in enterprise IT operations, applied on-device software development and Linux server administration. Experienced in deploying web services, building internal automation tools, and conducting undergraduate systems research in data center reliability.

Education

B.Sc. in Information and Communication Engineering (ICE) — CGPA: 3.58 / 4.00
Bangladesh University of Professionals (BUP), 2026 — *Dhaka, Bangladesh*

Higher Secondary Certificate (HSC), Mirpur Cantonment Public School & College, 2021 — GPA 5.00

Secondary School Certificate (SSC), Monipur High School & College, 2019 — GPA 5.00

Experience

IT Intern — May 2026 to Present
Startup Bangladesh Limited — *Dhaka, Bangladesh*

- Coordinated with external vendors to revamp corporate website migration ensuring alignment with compliance.
- Conducted user acceptance testing (UAT), bug tracking, and quality assurance for national platforms, including the IMM Platform and NSEP Platform.
- Engineered internal automation tools, including SBL Card Scanner and SBL Companion.
- Maintained Ubuntu Linux server environments with Plesk, configuring system checks and user access controls.

Key Projects

Ki Oushodh
Offline OCR Medicine Identifier | *Flutter, Google ML Kit*

- Built an offline Android application using Google ML Kit for on-device OCR, integrated on-device Bengali and English Text-to-Speech (TTS) to provide spoken dosage instructions for low-literacy and elderly users.
- Implemented a 5-tier fuzzy search algorithm to query an on-device database of 13,929 local medicines in under 350 ms.

BUP Bus Tracker
Real-Time Transit Logistics Application | *Flutter, Firebase, Google Maps API*

- Co-developed a campus transit tracking system with dual-app architecture, streaming real-time GPS coordinates between driver and student clients.
- Implemented route caching for low-connectivity zones and published the app on the Google Play Store.

Research & Academic Work

Undergraduate Thesis: Data Centre Reliability Optimization — 2025 – 2026
Exploring the Potential of Secondary Reliability Factor Optimisation to Reduce the Reliability Gap Between Tier-III and Tier-IV Data Centres While Maintaining Energy Efficiency

- Investigated secondary operational parameters (cooling switchover latency, power path transfer and thermal limits) to model availability improvements in Tier-III data centers toward Tier-IV standards without increasing Power Usage Effectiveness.
- Evaluated failure prediction and mitigation models using an industrial proxy dataset alongside an empirical survey of local facilities, demonstrating how operational tuning can narrow the Tier-III/IV annual downtime gap.

Leadership & Extracurriculars

- **Senior Vice President, BUP Robotics Club**: Organized operations for Circuit Clash 1.0, managing event logistics, technical setups, and vendor coordination. Represented BUP in regional RoboSoccer tournaments.
- **Web Administrator, BICE Academic Portal**: Developed and maintained the central academic resource portal on Google Sites for 4 years, serving 400+ students and faculty.
- **Media Coordinator, IEEE BUP Student Branch**: Supervised technical documentation and media archives for events, including the 2nd ICICT4SD conference and IEEE Branch Fest.

Technical Skills

- **Languages & Core**: Python, Dart, C/C++, PHP, SQL, JavaScript, HTML/CSS
- **Frameworks & Mobile**: Flutter, Laravel, Google ML Kit, Android SDK, REST APIs
- **Systems & Infrastructure**: Ubuntu Server, Plesk Panel, Git/GitHub, VirtualBox
